Quick start

Set up your theme in 3 easy steps.

The QuickStart guide assumes you already have a WordPress installation in place. If you don't have WordPress installed yet, please refer to the [official WordPress installation guide](#).

1. Install and activate the Theme.
2. Install and activate all the required plugins.
3. Import the demo content through Theme Options.

See a detailed theme installation guide on the next page. For complete documentation and tutorials on how to use our theme, visit our support page: OrionThemes.com

Theme Installation

You can install the theme in three different ways:

- Using **Envato Market plugin**
- Upload the theme zip file to Appearance » Themes » Add New » Upload Theme
- Direct FTP upload to wp-content/themes/ and activating it in Appearance » Themes

ThemeForest's preferred way of installing themes is using the Envato Market plugin. This assures easy updates when a new version of the theme is released.

Once your theme is installed, activate it.

A notification should appear to install required plugins. If you dismiss the notification by mistake or it doesn't appear for any other reason, click on Appearance » Install plugins.

Installing Plugins

Please make sure your theme is installed and activated, before installing the plugins.

Installing all required plugins is essential. Theme functionality and demo import depend on it.

Required plugins:

- Recycle theme plugin,
- Page Builder by SiteOrigin,
- SiteOrigin Widgets Bundle,
- Contact Form 7,
- Slider Revolution.

Installing required plugins is simple. You can start installing them directly on the install plugins notification or go navigate to Appearance » install plugins.

Demo Import

You can import the demo content in the **Theme Options** by clicking on the **Import** button. Be aware that stock images will not be imported as they are not included in the theme due to copyright.

Before you begin:

- **Make sure all required plugins are activated.**
- Check if your server meets the recommended settings.

Recommended server settings

Demo import is a very resource consuming process. In order to be completed successfully, there should be enough server resources available.

Setting	Recommended value
Max execution time	600
Memory limit	256M
Upload max filesize	32M
Max post size	32M

If there are not enough resources, the demo content will not fully import. In this case contact your hosting provider for assistance.

During the import process:

Demo import can take a few minutes, depending on your internet speed. Please be patient. You will get a notification when the import is completed.

Do not import demo twice. This can result in duplicate menu items and widgets.

Translations

Translating the theme into your language

The theme is translation ready. This means you can translate it into your language, or if your language is English, you can use this to change the default text strings in the theme and customize them to your liking.

There are several methods you can use, to translate the theme. You can check the official WordPress recommendations here.

Our preferred and recommended way of translating the theme is using a plugin called Loco Translate This plugin will automatically generate .po and .mo files for you, all translation can be done within WordPress dashboard.

To translate a theme into your language, follow these steps:

- Find the theme in the list at Loco Translate > Themes and click it.
- Click + New language and follow the on-screen prompts.
- When a new language is created, just click on it and you can start translating.
- When you are done, click save and you should already see the changes live.
